Cavotec to supply GSE for Emirates A380 Engineering Centre in Dubai

As [announced earlier this week](#), our [Airports unit](#) is to supply ground support equipment for the new [Emirates A380 Engineering Centre](#) at [Dubai International Airport](#).

We will install and commission in-ground pop-up pits and pre-conditioned air units for four new A380 maintenance hangars.

The centre is the largest single free-spanning roof structure in the Middle

East, and the four new hangars will bring the total at the facility to 12.

Our [innovative systems](#) already serve the existing hangars at the centre, as well as [Dubai's recently opened Concourse A](#) which is dedicated to Emirates' growing fleet of Airbus A380s.

Cavotec systems enable airports to reduce the use of diesel-driven equipment, increasing operational efficiency and resulting in cleaner air and less cluttered tarmac around aircraft.

Cavotec is a leading cleantech company that designs and delivers connection and electrification solutions to enable the decarbonization of ports and industrial applications.
