LPKF visar den nya Stencillasern G 6080 - Missa inte premiären på Electronica i München 9:e till 12:e November

We look forward to seeing you ...

LPKF will be located in Hall B1, Booth# 319 at Electronica 2010, November 9th-12th in Munich

Requirements are expanding in the SMT stencil business: be the one to set the standard. Premiering at Electronica in Munich is the new **StencilLaser G 6080**. This laser can do even more:

- It **inspects apertures** right during the cutting process without prolonging the working time.
- Will handle **different speeds and precision settings**, depending on the cut-out pattern.
- It can use different **cutting gasses - application specific** –specifically for each individual step.

In addition the maintenance has been reduced – making it worth taking a second look at. **Visit LPKF** at Electro nica in Hall B1/Booth# 319 to see the new **LPKF StencilLaser G 6080** live in action.

Talk to experts about the latest system generation and developments in the stencil market. Schedule a personal meeting by sending a short e-mail to laser.sales@lpkf.de

Kind regards,
LPKF Laser & Electronics AG
