Construction of nuclear plant in Argentina halted because of late payments

Construction has stopped in a nuclear plant in Argentina because the government is late in its payments to the contractors.

Late government payments are an endemic problem in the construction industry and in many countries as governments run low on cash towards the end of the year.

RIABU's Simon Littlewood and Mark Laudi dare to ask the question that is on everyone's mind when they read about this - what happens when contractors don't get paid? They do shoddy work. What happens when there's shoddy work in a nuclear plant?

RIABU helps companies of all sizes – but especially SMEs – be first in line to get paid. We provide you with insights into the past payment conduct of prospects and customers, and how long they are likely to take to pay their invoices, based on the experiences of other suppliers. RIABU also helps you to get paid on time in the future, by giving you access to the RIABU Academy. There you can find expert advice, best practice guides, and peer forums to improve your policies and processes and ensure you get paid faster.
